

Review of the monograph by Djalalov Muzaffar Mukhitdinovich
"Priority areas of high-quality training of information technology specialists in
the New Uzbekistan"

The monograph of Djalalov Muzaffar Mukhitdinovich on the topic: "Priority areas of high-quality training of information technology specialists in the New Uzbekistan" is relevant due to the dynamic development of modern processes of digitalization of education. Being the most critical component of the development of society, the information sphere, like any other sphere of social and social life, has its own legal field, within which the relations developing in the information space are regulated. The study contains a systematic analysis of regulatory legal acts and proposals for the comprehensive development of legal regulation in the field of digital education.

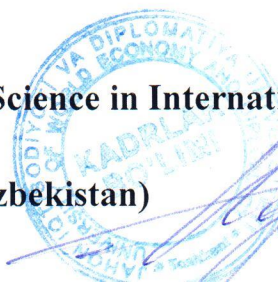

M. Djalalov, in his research, identifies the main directions of digitalization in the training of highly qualified specialists in the field of IT. It is evident that the digitalization of higher education is currently associated with the need to form the legal basis for the digital transformation of education as a single system of interchangeable normative legal acts. The author believes a unified regulatory framework should be formed, focused on the effectiveness of new legal acts related to developing a dynamic digital economy. At the same time, it was noted that in the future, the digitalization of education requires more attention to ethical and legal issues related to the use of digital technologies - data protection, confidentiality and security.

In his research, M. Djalalov was able to form reasonable proposals to improve the legal regulation system in the field of digitalization of education. The author presented the material logically and argumentatively. A sufficient number of scientific studies by leading scientists and practitioners and the necessary regulatory framework have been investigated.

This monograph contributes to the formation of a scientific, academic and practical understanding of the essence and main directions of high-quality training of information technology specialists in New Uzbekistan.

In general, the presented work is fundamental scientific research, and the well-founded practical recommendations presented in the work can serve as a basis for further development and improvement of the legal regulation system in education, contributing to the formation of a modern, favourable and secure digital educational space.
